Some explanations about VX Frame and DA module

This document describes the VX-3000 series frames and DA (Class D AMP) modules.
The DA module is mounted on the frame.

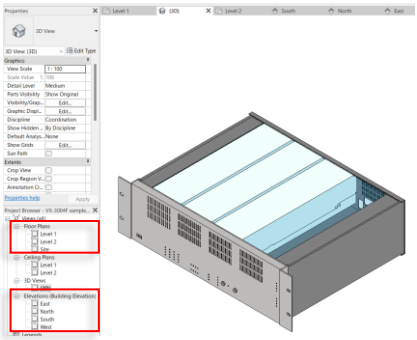

(1) Selection of DA module and VX-300LO

Three types of DA modules and VX-300LO (Line Out module) are included in one family file VX-DA_LO or VX-DATTW_LO.
This is selectable from the attribution in the family file.

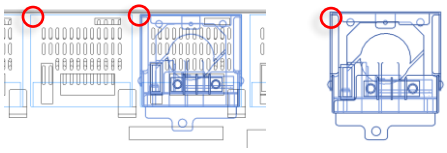

(2) DA frame mounting

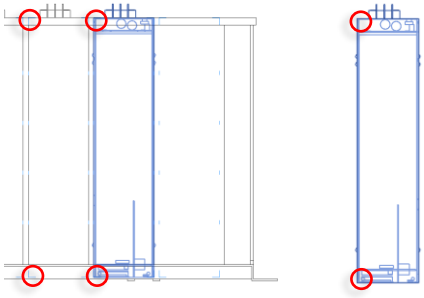

The project data (VX-3004F_sample.rvt, etc.) with the DA module already installed in the frame is included.

These can of course also be installed manually.

Display the floor plan and match the corner of the guideline in the frame with the corner of the DA module.

View the elevation and align the corners of the guidelines in the frame with the corners of the DA module.
